What's New in V2022.2

WebCentral

- *BIM Viewer
- *Maintenance Console: UI enhancements
- *Space Console: division & department names
- Workplace utilization report, V2
- *Calendar integration improvements
 - Desk booking
 - Teams and Zoom links, part 1
 - Outlook Plugin compatible with room calendars
- Audit Log improvements
- SaaS System Admin changes for clients, partners
- DUW outputs SQL

Workplace

- *New dashboard
- *UX improvements: communication log, mobile experience improvements
- Accessibility compliance: urgent fixes

OnSite

- *Checklists
- Localization

*Smart Client

- Line types and line width publishing
- BIM interoperability tool (model checks)
- Global publishing preferences
- UX improvements

Housekeeping

- OpenJDK 8 is de-supported. OpenJDK 11 only is supported
- Tomcat 8.5 is de-supported. Tomcat 9 only is supported
- The last five versions of AutoCAD and Revit are supported

* Indicates UserVoice feedback

What's New in V2022.1

*WebCentral

- Maintenance Console UI enhancements
- Space Console performance improvements
- Reservations: Exchange integration improvements
- Reservations: Combined Reservations and Hoteling report

*Workplace

- Show permanently assigned employees
- Service catalog: include request types that go to an external url

*Proofs of Concepts & Solutions

- AutoDesk Forge Building Console
- BMS Integration charts and KPIs

*Housekeeping

- OpenJDK 8 will be de-supported in V2022.02. OpenJDK 11 only beyond
- Tomcat 8.5 will be de-supported in V2022.02. Tomcat 9 only beyond
- From V2022.2, the last five versions of AutoCAD and Revit will be supported

* Indicates UserVoice feedback

What's New in V26.3

WebCentral

- Maintenance: enhanced document management and activity log
- *Space: improved PDF floor plans when zoomed
- *Space: improved UI for grid select and highlight
- *Reports Central: easier to save and delete reports

Workplace Hoteling

- *Book desks in bulk, naming employees and visitors
- Recommend previously booked dates
- *Search for employees who booked on a future date
- *Calendar integration enhancements MS Exchange

Workplace: accessibility

- WCAG 2.1 Levels A and AA

Workplace Mobile App

- *Upload pictures from the device camera roll
- QR code scans open mobile app

***Proofs of Concepts & Solutions**

- BMS / Fault Detection & Diagnostics
- IoT / Space Utilization
- AutoDesk Forge

***Housekeeping**

- Standard help system URL
- SaaS module navigation
- SaaS system administration for customers and partners

* Indicates UserVoice feedback

What's New in V26.2

Web Central

- *Maintenance Console: Work Request Details UX
- Reports Central: sort, group, aggregate data

***Workplace Hoteling**

- Book neighborhood space for teams
- Search and book rooms with amenities
- Locate reservations
- Restrict available rooms by organization, floor, team
- Show conference room names

Workplace: accessibility and performance testing

Web Central and Workplace

- *Mobile Client 4.0

***Proofs of Concepts & Solutions**

- BMS / Fault Detection & Diagnostics
- IoT / Space Utilization
- AutoDesk Forge

What's New in V26.3

- *Space Console: Query Search**
- *Space Console: User Experience**
- *Move Console: User Experience**
- Archibus Workplace: Accessibility**
- *Archibus Workplace: Hoteling**
- *Reports Central**
- Badging Connector and report**
- *Framework Controls: User Experience**

* Indicates UserVoice feedback

What's New in V25.4

Enabling facility managers to :

Limit bookings on any floor to reduced capacity targets

Restrict hotel desk reservations after capacity is reached

Limit users to no more than one booking for the same period

Other features:

Create user-defined fields for equipment and equipment standards

Access checklists in the Maintenance Console

Manage and update move projects with an easy-to-use interface

What's New in V25.3

View Configuration

- Enable, promote and define new fields directly from views
- Use those in forms, reports and floor plan highlights
- Powerful ways to configure data fields and views
- View Configuration feature: track, manage, and report on any available, stock field, the space inventory and employee directory.
- Add your own fields to Space inventory and employee directory

Maintenance

- Integrate checklists into maintenance workflow:
- Extends Extended Questionnaire functionality to maintenance checklists.
- Field personnel can use the checklists as reference of all required steps, creating a record for compliance purposes
- Define checklists and associate them with SLA workflow
- Use checklists for surveys, procedures, and inspections
- Review checklist results in reports

Workplace

- Building Name filter – easier to find available desk areas
- Load the building list more quickly

Space

- Allocation and Benchmarks report updates:
 - show data for a single floor upon loading
 - include a legend if there is a secondary grouping
 - include the filter restriction in the report's title
 - automatically restrict the report to the user's building and load the building's Occupancy by Floor chart
 - include the Employee Capacity, Occupancy Count, and Vacancies fields with totals in the Allocation tab chart drilldown

Compliance

- User interface update for Extended Questionnaires:
 - Define Compliance Questionnaire view has an updated user interface, matching the Checklist interface

What's New in V25.2

Space – Return to Work features

- Assigning employees to phases and days of the week
- Designating employees as working remotely
- Assigning room statuses
- Social distance validation
- Auto-cleaning after hoteling
- Dynamic Workplace home page

Ongoing safety

- Condition Assessment
- Emergency Preparedness
- Health & Safety

Space

- Application and User Interface Enhancements
- Platform and System Administration Changes
- Smart Client grid
- Smart Client Extension for AutoCAD
- Web Central platform

Return to Work Process

- Situational Awareness
 - Current space and occupancy inventory
- Plan
 - critical employees
 - phases and shifts
 - hoteling and fixed assignments
 - capacity constraints
- Enable
 - Space Console, Hoteling views, and workflow rules support a return-to-work strategy that enables:
 - Highlight available hotelable rooms on room plans
 - Employees to book validated desks
 - Enforce a workflow that ensures rooms are not available for booking until they have been cleaned after use
- Monitor and Adjust
 - "Dynamic Workplace". Ensure workplace safety upon staff's return. Provide your employees with the tools and resources that they need to stay safe upon their return.

What's New in V25.1

System changes

- Home page improvements throughout the entire software suite
- Application name changes to simplify and clarify the product offerings
- Schema and demonstration databases that present both Archibus modules and all other Archibus applications
- Numerous bug fixes that address key support issues across the product line

What's New in V24.4

WebCentral

- User-experience overhaul, including new navigation, improved dashboards, and user-interface enhancements to all Web Central views. Key views easier to access, more intuitive and better visually
- Home pages now serve as dashboards that focus on your key metrics and alerts
- Improved navigation system: sidebar navigation, which replaces the Process Navigator and home pages (now optional, user configurable)
- Updated the home pages for each application and module to focus on metrics and alerts
- The view header can now display a customer logo
- Suggest a Feature command, enabling you to enter ideas for new features and working methods
- Leases module for Cloud

What's New in V24.3

Space Console

- Redesigned - simpler and more intuitive user experience
- Effective use of screen space. Display and easily access the most relevant and frequently used views
- Smart search. Combine and simplify the most common search criteria.
- Smart interactions with fewer clicks. For example, the Space Console shows drawing highlights or panel details based on your search criteria
- Improved, streamlined, and more pleasing user interface with a modern look-and-feel.

Maintenance Mobile App

- Now contains user-friendly buttons to guide them through their work sequences in an intuitive manner
- Verifying and Recording Equipment by Barcode
- Enable an optional feature that prompts craftspersons to scan the equipment they are servicing. To enter a value into the Equipment field, simply scan the equipment's barcode
- Accessing Relevant Work Details
 - The Work List now displays each job's date/time scheduled and associated equipment, so that craftspersons can more efficiently prioritize their work at a glance.

Maintenance Console

- Since a work request may have several assignments and craftsperson logs, the Maintenance Console now summarizes estimated and actual hours by craftsperson so that supervisors can easily compare the totals side-by-side

What's New in V24.2

Cloud System now supports

- Archibus Cloud
- Archibus Foundations
- Archibus Space module
- Archibus Maintenance module
- Archibus Assets module
- Archibus Reservations module
- Reservations Calendar Console
- Serraview Space Planning
- Serraview Space Optimization module
- Archibus-Serraview Integration
- Support for Revit 2020 and AutoCAD 2020

What's New in V24.1

WebCentral

- Fresh look, with layout elements and fonts selected for easier legibility, particularly on complex forms.

Workplace

- New self-service interface
 - responsive Web application - easy to request maintenance and services, reserve spaces
 - Seamless experience across phones, tablets, desktops and kiosks
 - Interactive floor plans and QR codes

Archibus Extension for Lease Accounting

- Comply with accounting guidelines from FASB / IASB
- Leverages standard Archibus Lease Administration and Cost Administration applications, and the core Archibus features for accounting for capital and expense costs, cash flow projections and analysis, CPI escalations, and multi-currency conversions

Move Console

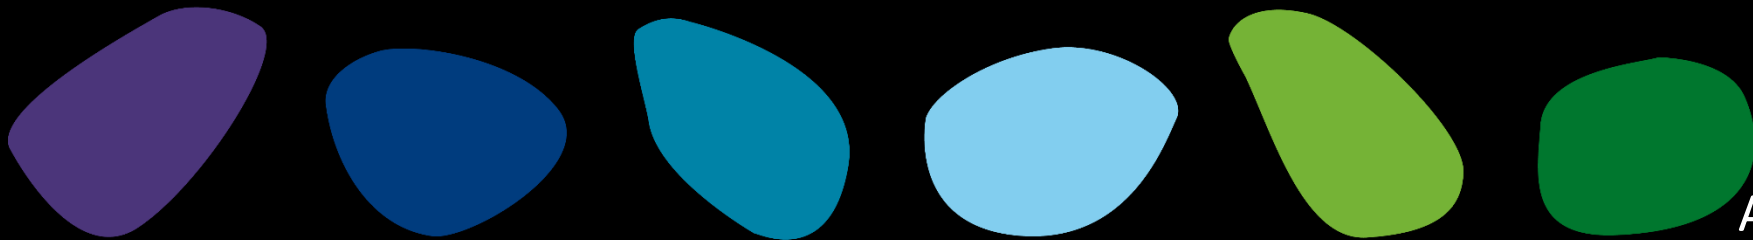

- Integrates group and individual moves into one view
- Provides move managers and space planners with additional visibility and increases the efficiency of moves
- New parameters / fields to support The Building Owners & Managers Association (BOMA) for calculating rentable area

Enterprise Asset Management Console

- Apply up to four different classification standards to an asset
- Greater insight into the condition via the asset portfolio
- Improved reporting on funding sources and fiscal year data
- Integration with BUILDER™ SMS
- Isolate and rectify missed/late work. Issue in PM Planner
- Better manage exterior work via geographic coordinates
- Archibus Building Operations Report Console improved
- Initiate multiple service requests per questionnaire question
- Improved Archibus Workplace Services with Outlook
- Archibus BIM Explorer enables users to easily navigate and find assets in complicated Revit models.
